Ultimate Modular Docks

Cable Pontoons

We have the pontoon for you.

Style, elegance and durability are three words that can always be associated with a Superior pontoon. Manufactured and installed to the highest possible standard, you can trust Superior to deliver a pontoon that is the best in its class.

Superior offers four distinct pontoon styles for both domestic and commercial applications...

The Super Elite series offers concrete floats with either aluminium, timber or composite walers while *the Elite series* has proprietary aluminium waler on all four sides and features a heavy duty 125mm concrete deck.

The Capri series features rotomoulded polyethylene flotation modules with a full aluminium super structure complete with a timber or composite decking.

The Ultimate Modular Dock series is a modular polyethylene pontoon that allows the user to create any dock configuration by choosing various individual module sizes and linking them with a heavy duty dog bone connector. This highly durable solution has minimal maintenance from the one piece flotation and deck module.

Accessories Include

- Lighttower (power, water & light)
- Seats
- Live bait wells
- Dry berth roller systems
- Manual or electric winches
- Extra tendering and/or cleats
- Handrails & flagpoles
- Jetski roller systems & docks
- Ladders, sinks, cupboards

Elite Pontoons - Reinforced Concrete Deck Pontoon

- > Constructed using a solid monolithic flotation system
- > Protected by a polyethylene skin that is tough and flexible
- > Independent expansion and contraction from the flotation and concrete deck

Capri Pontoons - Polyethylene Floats Bolted to Aluminium Structure

- > Custom made aluminium extruded waler design
- > Hard wearing polyethylene floats bolted to aluminium super structure
- > Tough, non deteriorating materials for harsh marine environments
- > Adjustable cleats and easy access to dual service ducts along each side
- > Numerous decking options

Ultimate Modular Docks - Linkable Polyethylene Module System

- > Rotational moulded polyethylene modules that are very tough yet flexible
- > Designed for non deterioration in marine environments and deflects U.V. rays
- > Very Versatile - can be arranged in many configurations

Piled Pontoons - Anchored Piles to Sea Bed System

- > Piles driven into the sea bed for ultimate stability
- > Attached to pontoon with specifically designed brackets
- > Very strong system, used for both domestic and commercial applications
- > Steel, spun concrete or cast-in-situ PVC encased piles for site specific conditions

Strut Pontoons - Aluminium Gangway and Strut System

- > Economical alternative for berthing smaller craft in moderately calm conditions
- > Ideal for deep water, rocky sea bed or structure close to shoreline
- > Double pivoted strut and gangway allows for vertical tidal and wave movement

Cable Pontoons - Aluminium Gangway and Stainless Steel Cable System

- > Economical alternative for berthing smaller craft
- > Ideal for mooring in sheltered conditions such as canal estates or lakes
- > Pivoted gangway - stainless steel cables create lateral support

Dry Berth Pontoons - Floating Concrete System

- > Larger vessel can be moored beside the pontoon simultaneously
- > Can Dry berth up to 6m Vessel
- > Optional Roller System & Electric Winch
